## Baum Folder / Gatherer / Staging / Inserter Solution

### **BFIA-3V-3 Century Series Carton Inserter**

3 Stage Carton Inserting station– This unit can be configured to three height zones to fit most document insertion box sizes. A sensor will determine the height of the box up stream and the document will be diverted to the accurate height insertion station to fit correctly into the top of the carton. Heights up to 48" tall to 3 1/2 tall can be feed down the conveyor system.

An optional bar code reader can be added to assure the correct carton get the correct document every time. If the documents do not match a signal is sent to the warehouse management system to be diverted or stopped depending on the warehouse management system.

### **BFS-3-3 Century Series Staging units**

Staging conveyors can be used from 1 to multiple depending upon the conveyor layout and when the license plate for each box has been scanned. These units can accurately store printed material until the correct carton is ready to be inserted.
